Delivery Check List: (Performed with Customer)

Important Driveline Information-all models

-Ensure center of drawbar pin hole is 14"-15" away from end of tractor PTO shaft, see Notice decal on hose support shield. If the tire touches the steel shield when turning and if you can't see any portion of the black PTO shield, you will break the 4 bolt flange bearing. When turning, there should be a minimum of ½" of black PTO shield exposed if your mowing conditions are relatively level and 1" to 2" if you have rolling terrain. Refer to your manual for further information. **See Pro-Max 36 manual page 12 for similar instructions**

Reviewed Operator's Manual: yes/no _____ Attached Unit to Tractor: yes/no _____
