PM-36 / PM-36G Pro-Max 36 Mowing System

One Awesome Super-mower

The **PM-36** when paired with the Progressive **TD92** rotary finishing mower, creates the **Pro-Max 36** mowing system. Towed by a ~100 H.P. tractor, the **Pro-Max 36** mowing system delivers a 36 foot wide cut swath and can mow up to 33 acres per hour. With the ability to reverse in a controlled manner, the **Pro-Max 36** mowing system excels in a high production environment. The **Pro-Max 36**, although a large machine has a light footprint making it ideal in wet conditions.

Following extensive customer input, the Next Generation **PM-36** raises the bar even higher with new features that will enhance productivity and further reduce ongoing maintenance requirements and cost. Proudly built in North America, some of the components and standard features of the Next Generation **PM-36** are shared with the **TD92** and include: enhanced clipping discharge and **maintenance free blade spindles** that reduce the cost of routine maintenance. The Next Generation **PM-36** will be available with either painted or galvanized, bolt-on deck shells. Four different OEM blades are available to match local growing conditions.

If you want to increase your mowing productivity, simply attach your current **TD92** to a **Pro-Max 36** and enjoy years of reliable mowing with the best productivity in the industry. The **Pro-Max 36** is not just one awesome super-mower, it is also, **“The Better Built Choice”**.

The Better Built Choice.[™]

Pro-Max Mowing System:

The Progressive Pro-Max Mowing System is a 5 deck finishing mower that is the combination of the highly successful Progressive TD92 and the **PM-36**. Together they provide a wide 36 foot cut swath and give a whole new meaning to productivity! Often growers will begin with the 22' wide TD92 and add a **PM-36** at a later date to meet their increased production needs. A Pro-Max Mowing System requires two double acting hydraulic circuits, one with float capability.

Bolt-on Deck Shell: Painted or Galvanized Versions Available

For producers who grow in sandy, or acidic soil conditions, the bolt-on design allows for inexpensive replacement of the deck shell if necessary. The bolt-on shell feature is made possible because only Progressive uses a separate deck and frame design. The galvanized deck shell option of the **PM-36** provides added protection necessary for a long service life in conditions where rusting is a concern.

Designed for the real world:

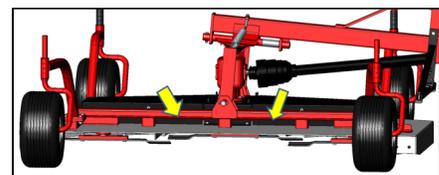

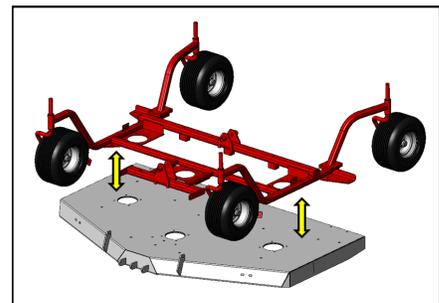

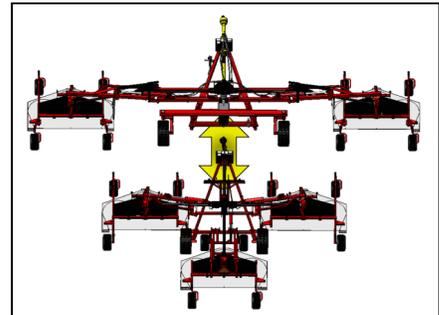

The **PM-36** mowing deck is designed to provide even dispersion of clippings through a large open rear discharge, avoiding clumping and windrows. Only minutes are required to change the cutting height from 3/4" to 5" - without the use of tools. Easy clipping clean out is incorporated into the deck frame design.

Commonality of Parts:

For simple servicing and part availability, many key components are common between the **PM-36** and TD92. For instance, all 5 mower deck components are totally interchangeable. This keeps the stock of spare parts required to a minimum and uptime to the max!

Maintenance Free Blade Spindles

Developed and tested over several years, Maintenance Free Blade Spindles are used to both lower the cost and time spent on routine maintenance. They also provide peace of mind that a missed greasing won't render the mower out of service.
